

Coking & CatCracking Seminar

If you are registered for the seminar, there is no additional fee to present. However, if you want more visual recognition of your company logo, larger slides and color printing in the seminar handouts, then consider purchasing the Presentation Promotional Package. The features are listed below and there are sample screens on the following pages.

Presentation Options

	Basic -No Charge	Promotional Package
Presentations webpage		
Company Name, Presentation Title and Description	Yes	Yes
More branding: Company Logo		Yes
Brochure		
Company Name, Presentation Title and Description	Yes	Yes
More branding: Company Logo		Yes
Seminar binder		
Black & white printing 3 small slides per page in the back of the book	Yes	
COLOR PRINTING, 2 large slides per page		Yes
Seminar Binder: Daily Schedule		
Company Name and Presentation Title	Yes	Yes
Seminar Binder: Index		
Company Name & Presentation Description	Yes	Yes
Company Logo		Yes
Social Media		Yes
Facebook 		Yes
Presentation Title, Description and Company Name, graphic		Yes
LinkedIn 		Yes
Presentation Title, Company Name & Presenter's Name		Yes

For information contact USA 1.360.966.7251, UK +1.44.(0)2081.503669
or info@coking.com

Basic Presentation Plan - No Charge

Presentation Promotional Package - €550

Compare all the features at

www.Coking.com/SeminarDUS/Presenting.shtm or

www.CatCracking.com/SeminarDUS/Presenting.shtm

Basic-No Charge option:
3 slides per page in black and white

FOSTER WHEELER
Fired Heaters

UNIFORM HEAT FLUX FIREBOX

More burners keep flames low in the firebox and spread the flames laterally

FLUOR

FOSTER WHEELER
Fired Heaters

RADIANT TUBE SUPPORTS OPTIONS

- > Top supported
 - Tubes will loose contact to support as the support grows downward
- > Bottom supported
 - Tubes maintain contact to support as support expands upward
- > Replaceable with tube removal less costly upfront but requires cutting tubes
- > Replaceable WITHOUT tube removal more costly upfront but prevents cutting tubes

FLUOR

FOSTER WHEELER
Fired Heaters

MODULARIZATION

- > Extent of Shop Fabrication is One of the Most Important Price Differentiators
- > Maximum Modularization has Numerous Connotations
- > Full Understanding of the Degree of Pre-Fabrication is Crucial for a Proper Evaluation and Understanding of TIC
- > Typically Field Work is a Multiple (X times) of the Equivalent Work Performed in a Shop

FLUOR

Promotional Package:
2 slides per page in full color

2011 CatCracking Papers

Shaw Energy & Chemicals

Harvey McQuiston

or Chris Santor

Successful Six-Year Run

- An FCC unit recently completed a run of over six years, after which only nominal maintenance was required in a scheduled turnaround. This paper discusses the process, mechanical, and operational changes that made such a successful six-year run possible.

INTERCAT Inc.

Ray Fletcher

or Martin Evans

Catalyst Additives increase Resid Process

- New technology, Cat-Aid, both passivates vanadium and absorbs nitrogen. This paper describes several applications of this technology and shows how the use of Cat-Aid allows refiners to increase amount of residue feed that they can process on their unit.

Tracerco

Dave Ferguson

Increasing FCC

Unit Efficiency

- In this presentation, case studies of FCCU investigations using radioisotope technology tools demonstrate how a better understanding of the equipment and its operation provided guidance to make corrections that reduced losses and improved performance.

Structural Preservation

Johnny Hill

Hexavalent Chromium Issues During Turnaround

- What Hexavalent Chromium (CrVI) is, what the areas of concern are for excessive accumulations, as well as ways to mitigate the exposure with ventilation plans and respiratory protection – ultimately reviewing its pros and cons.

FCCU Work Groups

Effective Turnarounds

CatCracker shutdown planning & budgeting; managing scope and duration.

Introductory remarks by Whitney Strickland of AltairStrickland

Facilitators:

Refractory reliability

Refractory reliability & hot spot monitoring/management/mitigation

Process excursion/event on mechanical integrity/reliability

Mechanical equipment deterioration

Mechanical equipment deterioration with catalyst loss & high velocity operations

Mitigating emissions during unit startups

Low SOx Emissions

Using Additives to Achieve low SOx Emissions in FCC Operations

Longer cycle time / Turnaround interval optimization

Toolbox for entry-level FCC engineering staff

Toolbox for entry-level FCC mechanical staff

Toolbox for operators

Including challenges operators face

Cyclone technology to improve reliability

Developments in Cyclone Technology improve FCC unit reliability, reduce problems of abrasion that cause unscheduled unit shutdowns.

"The seminar was excellent. The breakout sessions and hall meetings were extremely useful. The [shop] tour was great." -Marsulex (Calgary 2007)

Promotional package:
Shows your company logo on the seminar website
